S&P 500 index at inflection points

Equities

S&P 500 Price Index

Source: FactSet, Federal Reserve, Refinitiv Datastream, Standard & Poor's, J.P. Morgan Asset Management.
 Dividend yield is calculated as consensus analyst estimates of dividends in the next 12 months, provided by FactSet, divided by the most recent S&P 500 index price. Forward P/E ratio is the most recent S&P 500 index price divided by consensus estimates for earnings in the next 12 months, provided by IBES since January 1997 and FactSet since January 2022. Returns are cumulative and do not include the reinvestment of dividends. Past performance is no guarantee of future results.
 Guide to the Markets – U.S. Data are as of January 30, 2026.

S&P 500 valuation measures

Equities

S&P 500 index: Forward P/E ratio

Source: Bloomberg, FactSet, Moody's, Refinitiv Datastream, Robert Shiller, Standard & Poor's, J.P. Morgan Asset Management.
 Forward P/E ratio is the most recent S&P 500 index price divided by consensus analyst estimates for earnings in the next 12 months, provided by IBES since March 1994 and FactSet since January 2022. Shiller's P/E uses trailing 10-years of inflation-adjusted earnings as reported by companies. Dividend yield is calculated as consensus estimates of dividends in the next 12 months, provided by FactSet, divided by the most recent S&P 500 index price. EY minus Baa yield is the forward earnings yield (the inverse of the forward P/E ratio) minus the Bloomberg U.S. corporate Baa yield since December 2008 and interpolated using the Moody's Baa seasoned corporate bond yield for values beforehand.
 Guide to the Markets – U.S. Data are as of January 30, 2026.

P/E ratios and equity returns

Equities

Forward P/E and subsequent 1-year returns

S&P 500 Total Return Index

Forward P/E and subsequent 5-year annualized returns

S&P 500 Total Return Index

Source: FactSet, Refinitiv Datastream, Standard & Poor's, J.P. Morgan Asset Management. Returns are 12-month and 60-month annualized total returns, measured monthly, beginning 12/31/1993. R^2 represents the percent of variation in total return that can be explained by forward P/E ratios. The forward P/E ratio is the most recent S&P 500 index price divided by consensus analyst estimates for earnings in the next 12 months, provided by IBES since December 1993 and FactSet since January 2022. Past performance is no guarantee of future results.

Guide to the Markets – U.S. Data are as of January 30, 2026.

Sources of earnings growth and profit margins

Equities

S&P 500 EPS growth

Year-over-year growth broken into changes in revenue, profit margin and share count

S&P 500 profit margins

Quarterly earnings/sales

Source: Compustat, FactSet, Standard & Poor's, J.P. Morgan Asset Management.
 Historical EPS values are based on annual earnings per share. Forecasts for 2025, 2026 and 2027 reflect consensus analyst expectations, provided by FactSet. Past performance is no guarantee of future results.
 Guide to the Markets – U.S. Data are as of January 30, 2026.

S&P 500: Index concentration

Equities

P/E of top 10 and remaining companies in S&P 500

Next 12 months

Weight of the top 10 companies in the S&P 500

% of market capitalization, % of last 12 months' earnings

Source: FactSet, Standard & Poor's, J.P. Morgan Asset Management.
 Forward P/E ratio is the most recent price divided by consensus estimates for earnings in the next 12 months, provided by IBES since January 1996 and FactSet since January 2022. The remaining stocks represent the rest of the 490 companies in the S&P 500, and their P/E ratio is calculated by backing out the nominal earnings and market cap of the top 10 from that of the S&P 500.
Guide to the Markets – U.S. Data are as of January 30, 2026.

Magnificent 7: Performance, earnings and dispersion

Magnificent 7 performance in the S&P 500

Indexed to 100 on 1/1/2021, price return

Year-over-year earnings growth

Magnificent 7 performance dispersion

Price return

Source: FactSet, Standard & Poor's, J.P. Morgan Asset Management. Magnificent 7 (Mag 7) includes AAPL, AMZN, GOOGL/GOOG, META, MSFT, NVDA and TSLA. The S&P 500 ex-Mag 7 (S&P 493) is calculated by backing out a weighted average Mag 7 price return from the S&P 500 price return. *Share of returns represents the Mag 7's contribution to the index return. Past performance is no guarantee of future results. Guide to the Markets – U.S. Data are as of January 30, 2026.

Top 10 companies by decade

GTM | U.S. | 10

Equities

Top 10 S&P 500 companies by market capitalization

Percent of S&P 500 market capitalization as of the first day of the indicated year

Source: Bloomberg, Standard & Poor's, J.P. Morgan Asset Management. Companies are organized from highest weight at the bottom to lowest weight at the top. Past performance is no guarantee of future results. Guide to the Markets – U.S. Data are as of January 30, 2026.

Value vs. growth: Earnings, performance and valuations

S&P 500 earnings growth by sector

Russell 1000 Value vs. Growth, next 12 months

Source: FactSet, FTSE Russell, Standard & Poor's, J.P. Morgan Asset Management.

Growth is represented by the Russell 1000 Growth Index and value is represented by the Russell 1000 Value Index. (Top right) Graph was made by ranking the S&P 500 constituents by total return. (Bottom right) Long-term averages are calculated monthly since December 1997. Past performance is no guarantee of future results.

Guide to the Markets – U.S. Data are as of January 30, 2026.

Valuation dispersion

Equities

Valuation dispersion

Dispersion between the forward P/E of S&P 500 stocks in the 20th and 80th percentile

Source: Compustat, FactSet, Standard & Poor's, J.P. Morgan Asset Management. Guide to the Markets – U.S. Data are as of January 30, 2026.

Small caps, mid caps and large caps

Equities

Percent of market capitalization by sector

Valuations, interest coverage and earnings

Source: Compustat, FactSet, FTSE Russell, Standard & Poor's, J.P. Morgan Asset Management.

The S&P 500 is used for large cap, the Russell Mid Cap is used for mid cap and the Russell 2000 is used for small cap. (Right) Interest coverage ratio is calculated by dividing the last 12 months earnings by the interest expense, provided by FactSet. Data for the percent of unprofitable companies are quarterly and as of the most recently available quarter. Downward earnings index revisions are calculated as the percent change in EPS from the January 1 consensus analyst estimate, provided by FactSet, to the actual value and are averaged over the years from 2010 through 2024.

Guide to the Markets – U.S. Data are as of January 30, 2026.

Annual returns and intra-year declines

Equities

S&P 500 intra-year declines vs. calendar year returns

Despite average intra-year drops of 14.2%, annual returns were positive in 35 of 46 years

Source: FactSet, Standard & Poor's, J.P. Morgan Asset Management.
 Returns are based on price index only and do not include dividends. Intra-year drops refers to the largest peak-to-trough decline during the year. Returns shown are calendar year returns from 1980 to 2025, over which the average annual return was 10.7%. Past performance is no guarantee of future results.
 Guide to the Markets – U.S. Data are as of January 30, 2026.

Components of GDP growth

Economy

Contributors to real GDP growth

Quarter-over-quarter, seasonally adjusted annualized rate

Source: BEA, FactSet, J.P. Morgan Asset Management. Guide to the Markets – U.S. Data are as of January 30, 2026.

Labor market dynamics

Nonfarm payroll gains

Month-over-month change and 3-month moving average, thousands, SA
1,000

Civilian unemployment rate and annual wage growth

Private production and non-supervisory workers, seasonally adjusted, %

Source: BLS, FactSet, J.P. Morgan Asset Management.
Private production and non-supervisory jobs represent just over 80% of total private nonfarm jobs.
Guide to the Markets – U.S. Data are as of January 30, 2026.

Labor demand

JOLTS job openings*

Total job openings, thousands, seasonally adjusted

JOLTS hires

Total nonfarm hires, thousands, seasonally adjusted

JOLTS layoffs

Total nonfarm layoffs, thousands, seasonally adjusted

Source: U.S. Department of Labor, J.P. Morgan Asset Management.
 *JOLTS job openings from February 1974 to November 2000 are J.P. Morgan Asset Management estimates.
 Guide to the Markets – U.S. Data are as of January 30, 2026.

Labor supply

Labor force growth, native and immigrant contribution

Year-over-year change as of January, aged 16+, millions

Labor force participation

% of civilian noninstitutional population, seasonally adjusted (SA)

Single most important problem facing small businesses

% of firms, 3-month moving average

Source: FactSet, J.P. Morgan Asset Management; (Left) BLS; (Right) NFIB. Labor force data are sourced from the Current Population Survey, also known as the household survey, conducted by the BLS. *Latest figure reflects the y/y change as of the latest month. Guide to the Markets – U.S. Data are as of January 30, 2026.

Inflation components

Contributors to headline CPI inflation

Contribution to year-over-year % change in CPI, non-seasonally adjusted

Source: BLS, FactSet, J.P. Morgan Asset Management.

Contributions mirror the BLS methodology on Table 7 of the CPI report. Values may not sum to headline CPI figures due to rounding and underlying calculations. "Shelter" includes owners' equivalent rent, rent of primary residence and home insurance. "Food at home" includes alcoholic beverages. Headline and core PCE deflator inflation shown are based on seasonally adjusted data due to data availability. *Official October 2025 data unavailable due to government shutdown and data shown are J.P. Morgan Asset Management estimates.

Hyperscalers' cash flow and capex

% of sales

Source: Bloomberg, J.P. Morgan Asset Management.
 Data for 2025, 2026, 2027 and 2028 reflect consensus estimates. Capex shown is company total. *Hyperscalers are the large cloud computing companies that own and operate data centers with horizontally linked servers that, along with cooling and data storage capabilities, enable them to house and operate AI workloads.
 Guide to the Markets – U.S. Data are as of January 30, 2026.

Artificial intelligence: Implementation

Economy

Businesses using AI in any business function

% of all firms reporting use of AI applications

Companies spending on AI models, platforms and tools

% of businesses

AI agent deployment

% of organizations with revenues above \$1bn, KPMG Quarterly AI Pulse survey

Source: J.P. Morgan Asset Management; (Left) Census Business Trends and Outlook Survey; (Top right) RAMP AI Index; (Bottom right) KPMG Quarterly AI Pulse Survey.
 *Ramp data is based on anonymized corporate card and bill-pay transactions with AI vendors across over 50,000 U.S. businesses on Ramp's spend platform to provide a spend-based measure of AI adoption that complements the self-reported AI use (which includes free and internal tools) in the Census survey series. The two measures differ in firm coverage and methodology, with Ramp data skewed towards digitally enabled firms. **Starting Dec. 2025, the Census changed the wording of their survey question to capture usage of AI in "any business function", broader language compared to their prior "in producing goods and services" question. Total adoption jumped from 10% to 17% of businesses because of this switch. AI agents refer to AI systems designed to autonomously execute specific tasks or workflows with minimal human intervention.

Guide to the Markets – U.S. Data are as of January 30, 2026.

Tariffs on U.S. imports

Average tariff rate on U.S. goods imports for consumption

Duties collected / value of total goods imports for consumption, 1900 - 2024

Source: U.S. Census Bureau, U.S. Department of Treasury, U.S. International Trade Commission, J.P. Morgan Asset Management.
 For illustrative purposes only. The estimated weighted average statutory U.S. tariff rate includes all tariffs that are currently in effect, not announced. Imports for consumption: goods brought into a country for direct use or sale in the domestic market. *Figures are based on 2024 import levels and assume no change in demand due to tariff increases. Tariff revenue shown are figures from the Monthly Treasury Statement. Import figures included in the table are from the U.S. Census Bureau. Estimates, projections and other forward-looking statements are based upon current beliefs and expectations. They are for illustrative purposes only and serve as an indication of what may occur. Given the inherent uncertainties and risks associated with forecasts, projections or other forward-looking statements, actual events, results or performance may differ materially from those reflected or contemplated.

The Fed and interest rates

Fixed Income

Federal funds rate expectations

FOMC and market expectations for the federal funds rate

Source: Bloomberg, FactSet, Federal Reserve, J.P. Morgan Asset Management

Market expectations are based off of USD Overnight Index Swaps. *Long-run projections are the rates of growth, unemployment and inflation to which a policymaker expects the economy to converge over the next five to six years in absence of further shocks and under appropriate monetary policy. Forecasts, projections and other forward-looking statements are based upon current beliefs and expectations. They are for illustrative purposes only and serve as an indication of what may occur. Given the inherent uncertainties and risks associated with forecasts, projections or other forward-looking statements, actual events, results or performance may differ materially from those reflected or contemplated.

Global bond market

USD trillions

Source: J.P. Morgan Asset Management; (Left) Bloomberg, FactSet; (Right) BIS.

Fixed income sectors shown above are provided by Bloomberg and are represented by the global aggregate for each country except where noted. EMD sectors are represented by the J.P. Morgan EMBIG Diversified Index (USD), the J.P. Morgan GBI EM Global Diversified Index (LCL) and the J.P. Morgan CEMBI Broad Diversified Index (Corp). European Corporates are represented by the Bloomberg Euro Aggregate Corporate Index and the Bloomberg Pan-European High Yield Index. Sector yields reflect yield to worst. Correlations are based on 10-years of monthly returns for all sectors. Countries included in the emerging market debt calculation are those represented in the J.P. Morgan EMB Index suite for which the BIS has data. Global bond market regional breakdown may not sum to 100% due to rounding. USD yield shows the total effective yield a U.S.-based investor could expect after accounting for the hedging premium. Hedging premiums are calculated taking the spread between the 3-month SOFR rate and the 3-month short-term lending rates in local market referenced (e.g. 3-month Euribor is used for European economies) and do not include transactional fees that can reduce effective yield. Past performance is no guarantee of future results.

Annualized (Ann.) return and volatility (Vol.) represents the period from 12/31/2010 to 12/31/2025. Please see the disclosure page at the end for index definitions. All data represent total return for stated period. Past performance is no guarantee of future results. Guide to the Markets - U.S. Data are as of January 30, 2026.

Time, diversification and the volatility of returns

Range of stock, bond and blended total returns

Annual total returns, 1950 - 2025

Source: Bloomberg, FactSet, Federal Reserve, Standard & Poor's, Strategas/Ibbotson, J.P. Morgan Asset Management. Returns shown are based on calendar year returns from 1950 to 2025. Stocks: S&P 500; Bonds: Strategas/Ibbotson for periods prior to 1976 and the Bloomberg U.S. Aggregate thereafter. Growth of \$100,000 is based on annual average total returns from 1950 to 2025. Guide to the Markets – U.S. Data are as of January 30, 2026.

Risk investing and the power of compounding

Change in purchasing power by investment in major asset class

Growth of \$10,000, adjusted for inflation, 1996 - 2025, annual returns

Investing Principles

Source: Bloomberg, Bureau of Labor Statistics, Ibbotson, J.P. Morgan Asset Management.
 Large cap stocks: S&P 500 TR Index; Small cap stocks: Russell 2000 TR Index; Corporate bonds: Bloomberg Long U.S. Corporate Index; Cash: Bloomberg U.S. Treasury Bills Index. All returns are inflation-adjusted total returns, using annual average headline CPI inflation.
 Guide to the Markets – U.S. Data are as of January 30, 2026.

Economic and market cycles

Length of expansions and recessions

Length and severity of bear and subsequent bull markets

Investing Principles

Source: BEA, FactSet, NBER, Standard & Poor's, J.P. Morgan Asset Management.
 (Left) Chart assumes the current expansion lasted until at least the end of last month. (Right) Bear markets are defined as a 20% drawdown from the prior peak and measured from peak to bottom. Bull markets are measured from the bottom of the prior bear market to the peak.
 Guide to the Markets – U.S. Data are as of January 30, 2026.

Diversification and the frequency of positive returns

Frequency of positive returns across timeframes

Rolling total daily returns, Jan 1, 1989 - Dec 31, 2025

Investing Principles

Source: Bloomberg, FactSet, Standard & Poor's, J.P. Morgan Asset Management. Guide to the Markets – U.S. Data are as of January 30, 2026.

Investing at all-time highs

All-time highs and market floors

S&P 500 price index, daily, 1950 - present

Average cumulative S&P 500 total returns

Jan 1, 1988 - Dec 31, 2025

Investing Principles

Source: FactSet, Standard & Poor's, J.P. Morgan Asset Management.

(Left) *Market floor is defined as an all-time high from which the market never fell more than 5%. (Right) ***"Invest on any day" represents average of forward returns for the entire time period whereas "Invest at a new high" represents average of rolling forward returns calculated from each new S&P 500 high for the subsequent 3-month, 6-month, 1-year, 2-year, 3-year and 5-year intervals, with data starting 1/1/1988 through 12/31/2025. Guide to the Markets – U.S. Data are as of January 30, 2026.

Manager dispersion

20-year manager return dispersion and growth of capital

By asset type, annualized total returns, growth of \$1,000 invested 20 years ago*

Source: Morningstar, J.P. Morgan Asset Management.

*Represents average annual portfolio return dispersion between the 10th and 90th percentile over a 20-year period for each Morningstar category, including mutual funds and ETFs. Returns are updated monthly and reflect data as of the latest available month, typically with a one-month lag. This information is for illustrative purposes only, does not reflect actual investment results, is not a guarantee of future results and is not a recommendation. Guide to the Markets – U.S. Data are as of January 30, 2026.

60/40 portfolio drift

60/40 portfolio composition by asset class

December 31, 2019 - present, no rebalancing

Investing Principles

Source: Bloomberg, FactSet, MSCI, Russell, Standard & Poor's, J.P. Morgan Asset Management. Standard asset allocation at the end of 2019 assumes 60% weight to global equities and 40% to U.S. fixed Income. U.S. Value: Equal-weighted Russell 1000 Value and Russell 2000 Value, U.S. Growth: Equal-weighted Russell 1000 Growth and Russell 2000 Growth, International: MSCI ACWI ex-US, Fixed Income: 10% Bloomberg Global HY Index and 30% Bloomberg U.S. Aggregate. Past performance is no guarantee of future results. Guide to the Markets - U.S. Data are as of January 30, 2026.

60/40 returns and stock-bond correlation

60/40 annual return decomposition

Total return, %

S&P 500 / U.S. 10-year Treasury correlation

Rolling 24-month corr. based on monthly total returns, 1964 - present

Investing Principles

Source: Bloomberg, FactSet, Haver Analytics, LSEG, Standard & Poor's, J.P. Morgan Asset Management.

(Left) The 60/40 portfolio is 60% invested in the S&P 500 Total Return Index and 40% invested in the Bloomberg U.S. Aggregate Total Return Index. (Right) Correlations are calculated using monthly returns of S&P 500 TR Index and U.S. 10-year Constant Maturity TR Index. For the U.S. 10-year Constant Maturity TR Index, data until 2006 are sourced from Haver Analytics and from FactSet thereafter. *Simple average of the y/y percent change in headline CPI during each period. For the year 2025, October CPI data is missing due to the U.S. federal government shutdown. *Guide to the Markets – U.S.* Data are as of January 30, 2026.

Single-stock volatility and equity market returns

Number of S&P 500 stocks with a drawdown of 5% or more

Despite positive index returns in 22 of 30 years, roughly 75% of stocks experienced a drawdown of 5% or more in any given year

Source: FactSet, Standard & Poor's, J.P. Morgan Asset Management. A 5% drawdown is calculated from each stock's start-of-year price. If a stock declines by 5% or more at any point during the year, it is counted exactly once – even if it later recovers and declines by 5% again. Data for 2026 are year-to-date as of the latest completed month. *Guide to the Markets – U.S.* Data are as of January 30, 2026.

Capital gains by investment vehicle

Capital gains paid by investment vehicle

Weighted capital gains/assets under management

Investing Principles

Source: Morningstar, J.P. Morgan Asset Management.

Capital gains are the taxable profits made when an asset is sold for more than its initial purchase cost. "Weighted" capital gains are the capital gains paid by an investment vehicle divided by its net asset value (NAV). NAV is the per-share value of a fund, calculated by subtracting the fund's liabilities from its total assets and dividing the result by the number of outstanding shares.

This slide comes from our *Guide to ETFs*.

Guide to the Markets – U.S. Data are as of January 30, 2026.

Asset allocation in retirement funds

Private defined benefit plans

Portfolio weights and values (USD trillions), 1Q95 - 3Q25

Private defined contribution plans

Portfolio weights and values (USD trillions), 1Q95 - 3Q25

Source: Federal Reserve, Investment Company Institute, J.P. Morgan Asset Management.

Data represent only investible assets sourced from the L.118 table of the Z.1 Financial Accounts of the United States. Miscellaneous assets are excluded, as they primarily represent accounting entries for unfunded liabilities and contributions receivable rather than investible holdings. For private defined benefit (DB) plans, mutual fund assets have limited allocation data and are a relatively small share of total assets. As a result, these mutual fund assets are assumed to have the same allocation as the broader portfolios. For private defined contribution (DC) plans, where mutual fund shares constitute a majority of total assets, allocation across broad asset classes is based on data tracked by the Investment Company Institute.

Guide to the Markets – U.S. Data are as of January 30, 2026.

Growth and evolution of the ETF market

Growth in AUM of U.S. ETFs

By ETF investment process, USD trillions

Investing Principles

Source: Bloomberg, J.P. Morgan Asset Management.

"Market-cap weighted" ETFs are index-linked passive investment vehicles. "Factor" ETFs are ETFs that focus on specific factors or characteristics and are passively linked to a custom index. *The "ETF Rule," officially SEC Rule 6c-11, went into effect in December 2019 and modernized regulation of ETFs as open-ended funds by establishing a clear and consistent framework for most ETFs across both index and actively managed strategies, enabling ETF issuers to bring new strategies to market, and permitting "custom in-kind" creation and redemption baskets to be available for all types of covered ETFs under the new regulation. Data are as of the latest available month, typically with a one-month lag.

This slide comes from our *Guide to ETFs*.

U.S.

69

All indexes are unmanaged and an individual cannot invest directly in an index. Index returns do not include fees or expenses.

Equities:

The **Dow Jones Industrial Average** is a price-weighted average of 30 actively traded blue-chip U.S. stocks.

The **MSCI ACWI (All Country World Index)** is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets.

The **MSCI EAFE Index (Europe, Australasia, Far East)** is a free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the US & Canada.

The **MSCI Emerging Markets Index** is a free float-adjusted market capitalization index that is designed to measure equity market performance in the global emerging markets.

The **MSCI Europe Index** is a free float-adjusted market capitalization index that is designed to measure developed market equity performance in Europe.

The **MSCI Pacific Index** is a free float-adjusted market capitalization index that is designed to measure equity market performance in the Pacific region.

The **Russell 1000 Index**® measures the performance of the 1,000 largest companies in the Russell 3000.

The **Russell 1000 Growth Index**® measures the performance of those Russell 1000 companies with higher price-to-book ratios and higher forecasted growth values.

The **Russell 1000 Value Index**® measures the performance of those Russell 1000 companies with lower price-to-book ratios and lower forecasted growth values.

The **Russell 2000 Index**® measures the performance of the 2,000 smallest companies in the Russell 3000 Index.

The **Russell 2000 Growth Index**® measures the performance of those Russell 2000 companies with higher price-to-book ratios and higher forecasted growth values.

The **Russell 2000 Value Index**® measures the performance of those Russell 2000 companies with lower price-to-book ratios and lower forecasted growth values.

The **Russell 3000 Index**® measures the performance of the 3,000 largest U.S. companies based on total market capitalization.

The **Russell Midcap Index**® measures the performance of the 800 smallest companies in the Russell 1000 Index.

The **Russell Midcap Growth Index**® measures the performance of those Russell Midcap companies with higher price-to-book ratios and higher forecasted growth values. The stocks are also members of the Russell 1000 Growth index.

The **Russell Midcap Value Index**® measures the performance of those Russell Midcap companies with lower price-to-book ratios and lower forecasted growth values. The stocks are also members of the Russell 1000 Value index.

The **S&P 500 Index** is widely regarded as the best single gauge of the U.S. equities market. The index includes a representative sample of 500 leading companies in leading industries of the U.S. economy. The **S&P 500 Index** focuses on the large-cap segment of the market; however, since it includes a significant portion of the total value of the market, it also represents the market.

Fixed income:

The **Bloomberg 1-3 Month U.S. Treasury Bill Index** includes all publicly issued zero-coupon US Treasury Bills that have a remaining maturity of less than 3 months and more than 1 month, are rated investment grade, and have \$250 million or more of outstanding face value. In addition, the securities must be denominated in U.S. dollars and must be fixed rate and non convertible.

The **Bloomberg Global High Yield Index** is a multi-currency flagship measure of the global high yield debt market. The index represents the union of the US High Yield, the Pan-European High Yield, and Emerging Markets (EM) Hard Currency High Yield Indices. The high yield and emerging markets sub-components are mutually exclusive. Until January 1, 2011, the index also included CMBS high yield securities.

The **Bloomberg Municipal Index**: consists of a broad selection of investment-grade general obligation and revenue bonds of maturities ranging from one year to 30 years. It is an unmanaged index representative of the tax-exempt bond market.

The **Bloomberg US Dollar Floating Rate Note (FRN) Index** provides a measure of the U.S. dollar denominated floating rate note market.

The **Bloomberg US Corporate Investment Grade Index** is an unmanaged index consisting of publicly issued US Corporate and specified foreign debentures and secured notes that are rated investment grade (Baa3/BBB or higher) by at least two ratings agencies, have at least one year to final maturity and have at least \$250 million par amount outstanding. To qualify, bonds must be SEC-registered.

The **Bloomberg US High Yield Index** covers the universe of fixed rate, non-investment grade debt. Eurobonds and debt issues from countries designated as emerging markets (sovereign rating of Baa1/BBB-/BBB+ and below using the middle of Moody's, S&P, and Fitch) are excluded, but Canadian and global bonds (SEC registered) of issuers in non-EMG countries are included.

The **Bloomberg US Mortgage Backed Securities Index** is an unmanaged index that measures the performance of investment grade fixed-rate mortgage backed pass-through securities of GNMA, FNMA and FHLMC.

The **Bloomberg US TIPS Index** consists of Inflation-Protection securities issued by the U.S. Treasury.

The **J.P. Morgan Emerging Market Bond Global Index (EMBI)** includes U.S. dollar denominated Brady bonds, Eurobonds, traded loans and local market debt instruments issued by sovereign and quasi-sovereign entities.

The **J.P. Morgan Domestic High Yield Index** is designed to mirror the investable universe of the U.S. dollar domestic high yield corporate debt market.

The **J.P. Morgan Corporate Emerging Markets Bond Index Broad Diversified (CEMBI Broad Diversified)** is an expansion of the **J.P. Morgan Corporate Emerging Markets Bond Index (CEMBI)**. The CEMBI is a market capitalization weighted index consisting of U.S. dollar denominated emerging market corporate bonds.

The **J.P. Morgan Emerging Markets Bond Index Global Diversified (EMBI Global Diversified)** tracks total returns for U.S. dollar-denominated debt instruments issued by emerging market sovereign and quasi-sovereign entities: Brady bonds, loans, Eurobonds. The index limits the exposure of some of the larger countries.

The **J.P. Morgan GBI EM Global Diversified** tracks the performance of local currency debt issued by emerging market governments, whose debt is accessible by most of the international investor base.

The **U.S. Treasury Index** is a component of the U.S. Government index.

Other asset classes:

The **Alerian MLP Index** is a composite of the 50 most prominent energy Master Limited Partnerships (MLPs) that provides investors with an unbiased, comprehensive benchmark for the asset class.

The **Bloomberg Commodity Index** and related sub-indices are composed of futures contracts on physical commodities and represents twenty two separate commodities traded on U.S. exchanges, with the exception of aluminum, nickel, and zinc

The **Cambridge Associates U.S. Global Buyout and Growth Index®** is based on data compiled from 1,768 global (U.S. & ex-U.S.) buyout and growth equity funds, including fully liquidated partnerships, formed between 1986 and 2013.

The **CS/Tremont Hedge Fund Index** is compiled by Credit Suisse Tremont Index, LLC. It is an asset-weighted hedge fund index and includes only funds, as opposed to separate accounts. The Index uses the Credit Suisse/Tremont database, which tracks over 4500 funds, and consists only of funds with a minimum of US\$50 million under management, a 12-month track record, and audited financial statements. It is calculated and rebalanced on a monthly basis, and shown net of all performance fees and expenses. It is the exclusive property of Credit Suisse Tremont Index, LLC.

The **HFRI Monthly Indices (HFRI)** are equally weighted performance indexes, utilized by numerous hedge fund managers as a benchmark for their own hedge funds. The HFRI are broken down into 4 main strategies, each with multiple sub strategies. All single-manager HFRI Index constituents are included in the HFRI Fund Weighted Composite, which accounts for over 2200 funds listed on the internal HFR Database.

The **NAREIT EQUITY REIT Index** is designed to provide the most comprehensive assessment of overall industry performance, and includes all tax-qualified real estate investment trusts (REITs) that are listed on the NYSE, the American Stock Exchange or the NASDAQ National Market List.

The **NFI-ODCE**, short for NCREIF Fund Index -Open End Diversified Core Equity, is an index of investment returns reporting on both a historical and current basis the results of 33 open-end commingled funds pursuing a core investment strategy, some of which have performance histories dating back to the 1970s. The NFI-ODCE Index is capitalization-weighted and is reported gross of fees. Measurement is time-weighted.

Definitions:

Investing in **alternative assets** involves higher risks than traditional investments and is suitable only for sophisticated investors. Alternative investments involve greater risks than traditional investments and should not be deemed a complete investment program. They are not tax efficient and an investor should consult with his/her tax advisor prior to investing. Alternative investments have higher fees than traditional investments and they may also be highly leveraged and engage in speculative investment techniques, which can magnify the potential for investment loss or gain. The value of the investment may fall as well as rise and investors may get back less than they invested.

Bonds are subject to interest rate risks. Bond prices generally fall when interest rates rise.

Investments in **commodities** may have greater volatility than investments in traditional securities, particularly if the instruments involve leverage. The value of commodity-linked derivative instruments may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, political and regulatory developments. Use of leveraged commodity-linked derivatives creates an opportunity for increased return but, at the same time, creates the possibility for greater loss.

Derivatives may be riskier than other types of investments because they may be more sensitive to changes in economic or market conditions than other types of investments and could result in losses that significantly exceed the original investment. The use of derivatives may not be successful, resulting in investment losses, and the cost of such strategies may reduce investment returns.

Distressed Restructuring Strategies employ an investment process focused on corporate fixed income instruments, primarily on corporate credit instruments of companies trading at significant discounts to their value at issuance or obliged (par value) at maturity as a result of either formal bankruptcy proceeding or financial market perception of near term proceedings.

Investments in **emerging markets** can be more volatile. The normal risks of investing in foreign countries are heightened when investing in emerging markets. In addition, the small size of securities markets and the low trading volume may lead to a lack of liquidity, which leads to increased volatility. Also, emerging markets may not provide adequate legal protection for private or foreign investment or private property.

The price of **equity securities** may rise, or fall because of changes in the broad market or changes in a company's financial condition, sometimes rapidly or unpredictably. These price movements may result from factors affecting individual companies, sectors or industries, or the securities market as a whole, such as changes in economic or political conditions. Equity securities are subject to "stock market risk" meaning that stock prices in general may decline over short or extended periods of time.

Equity market neutral strategies employ sophisticated quantitative techniques of analyzing price data to ascertain information about future price movement and relationships between securities, select securities for purchase and sale. Equity Market Neutral Strategies typically maintain characteristic net equity market exposure no greater than 10% long or short.

Global macro strategies trade a broad range of strategies in which the investment process is predicated on movements in underlying economic variables and the impact these have on equity, fixed income, hard currency and commodity markets.

International investing involves a greater degree of risk and increased volatility. Changes in currency exchange rates and differences in accounting and taxation policies outside the U.S. can raise or lower returns. Some overseas markets may not be as politically and economically stable as the United States and other nations.

There is no guarantee that the use of **long and short positions** will succeed in limiting an investor's exposure to domestic stock market movements, capitalization, sector swings or other risk factors. Using long and short selling strategies may have higher portfolio turnover rates. Short selling involves certain risks, including additional costs associated with covering short positions and a possibility of unlimited loss on certain short sale positions.

Merger arbitrage strategies which employ an investment process primarily focused on opportunities in equity and equity related instruments of companies which are currently engaged in a corporate transaction.

Mid-capitalization investing typically carries more risk than investing in well-established "blue-chip" companies. Historically, mid-cap companies' stock has experienced a greater degree of market volatility than the average stock.

Price to forward earnings is a measure of the price-to-earnings ratio (P/E) using forecasted earnings. **Price to book value** compares a stock's market value to its book value. **Price to cash flow** is a measure of the market's expectations of a firm's future financial health. **Price to dividends** is the ratio of the price of a share on a stock exchange to the dividends per share paid in the previous year, used as a measure of a company's potential as an investment.

Real estate investments may be subject to a higher degree of market risk because of concentration in a specific industry, sector or geographical sector. Real estate investments may be subject to risks including, but not limited to, declines in the value of real estate, risks related to general and economic conditions, changes in the value of the underlying property owned by the trust and defaults by borrower.

Relative Value Strategies maintain positions in which the investment thesis is predicated on realization of a valuation discrepancy in the relationship between multiple securities.

Small-capitalization investing typically carries more risk than investing in well-established "blue-chip" companies since smaller companies generally have a higher risk of failure. Historically, smaller companies' stock has experienced a greater degree of market volatility than the average stock.
